## Drop temp tablespace taking long time

### Created new temporary tablespace:

```
CREATE TEMPORARY TABLESPACE TEMP01 TEMPFILE
'/u01/oracle/oradata/temp02.dbf' SIZE 2g;
```

### Make new temporary tablespace as default:

```
ALTER DATABASE DEFAULT TEMPORARY TABLESPACE TEMP01;
```

### Dropping old temporary tablespace, Which is taking long time to complete:

```
DROP TABLESPACE TEMP INCLDING CONTENTS AND DATAFILES;
```

The issue because of temp is being used by oracle sessions

### SOLUTION 1:

```
SQL>SHUTDOWN IMMEDIATE;
SQL>STARTUP
SQL>SELECT NAME,OPEN_MODE,LOG_MODE FROM V$DATABASE;
SQL>DROP TABLESPACE TEMP INCLUDIING CONTENTS AND DATAFILES;
```

### SOLUTION 2:

Run below query and see any sessions using temp, Find out the all the sessions that are not active and kill those sessions.

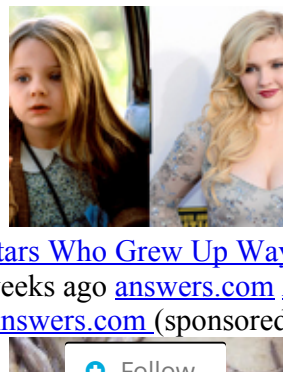

```
select tu.username,s.sid,s.serial# from v$tempseg_usage tu, v$session s
where tu.session_addr=s.saddr;
```

```
alter system kill session 'sid,serial';
```

Thank You !!
